IELTS Listening Version 59435 You will hear a number of different recordings, and you will have to answer questions on what you hear. There will be time for you to read the instructions and questions, and you will have a chance to check your work. All the recordings will be played once only.

The test is in four parts. Write all your answers in the listening question booklet. At the end of the test, you will be given ten minutes to transfer your answers to an answer sheet.

Now turn to Part 1 on page 2 of your question booklet. Part 1 You will hear a telephone conversation between a man who wants to join an amateur dramatic society and the society secretary. First, you have some time to look at questions 1 to 5. Now listen carefully and answer questions 1 to 5. Hello, how can I help you? Hi, I've just moved to the area and saw an advertisement for your drama society, so I'm calling to find out some more details.

Sure. I'm the society secretary. My name's Jane Caulfield.

Thanks. Can you tell me exactly where the society is based? Well, the address for the society is my address, which is 117 Green Road, like the colour, and that's in Prestwynne. But that's just the mailing address.

It's not where we actually rehearse. We do that at the clubhouse in Wynne. It's behind the playing fields.

It used to be a cricket club, you see. Oh, right. So, is this a new interest or do you have some acting experience? It doesn't matter if you haven't, you know, experience isn't a requirement.

That's good because I haven't got any, but I am musical and I've got some experience of song festivals. That's great. We're always looking for actors and singers, of course, especially male ones.

Oh, by the way, do you have a car? Yes. Why? It's a big help if you're able to drive. Not all our members have access to transport, so it's very helpful.

I see. Well, I'm sure I can help out there. So, when do you actually meet? On Tuesday from 6 till 8pm.

Sorry, you said Tuesday, not Thursday? Yes. Good. Thursdays are a problem for me.

I do some private tutoring and can't move that. Right. And that's all year, no breaks? Good point.

We do close for a couple of weeks, you know, in August, so we don't get together then. Before

you hear the rest of the conversation, you have some time to look at questions 6 to 10. Now listen and answer questions 6 to 10.

And is there a joining fee? To be a member costs just £40. A year? Yes, and that covers our annual dinner. Right.

But there's a rate for concessions, which are for people over 60 and the unemployed. I've just retired, so that's good news. What's the discount? It was 10%, but now it's more.

You pay just £25, which is a reduction of £15. Every little helps after all, especially with a teenage son. Actually, I wanted to ask if there's an age limit.

Could Jack come along too? He's 15. Actually, we have a special youth group and that's open to anyone up to and including 16 years old. So he could join that.

Great. Keep him out of trouble. And what about the shows you put on? You said you were very busy.

Do you have plays, etc., every year? Or how does it work? Well, we put on at least two productions a year. Occasionally we might do Shakespeare, but normally we choose works by modern playwrights. Sounds quite varied and challenging.

And you rehearse for the two productions when you meet up? Certainly, but that's not all we do. We also write our own family show each winter for the December holidays, which is always a lot of fun and is actually very popular in the local community. We donate the money we make to the children's hospital here.

Oh, that sounds very nice. That is the end of Part 1. You now have one minute to check your answers to Part 1. Part 2 You will hear a woman called Sandra Hayes who works at a bird park talking to a group of people who want to volunteer there. First you have some time to look at questions 11 to 15.

Now listen carefully and answer questions 11 to 15. Hello, my name is Sandra Hayes and I'm from Clifton Bird Park. It's great to see so many possible volunteers here.

The park is now a very popular attraction in this area. I think people love coming to see so many different types of birds in a beautiful environment. For some species that we have here, there aren't many still alive in the wild, so a big part of our job is to make sure we help their numbers increase.

All the birds are native species. We need volunteers to help the bird park officers with different jobs. One of these is gardening.

Obviously summer is the time when we have most visitors, but the park needs looking after all year round. If you want to help, you can choose which day, although we do already have plenty of volunteers working Saturdays and Sundays, but one day every four weeks is the minimum

commitment that we ask for. So, who's the ideal volunteer for gardening work? If you have expert knowledge about flowers and trees, great, but we're looking more for people who are flexible and turn up no matter whether it's raining or baking hot.

That's what'll make you the best person for the job. It's all teamwork, so you'll have plenty of support. What about volunteer guides? A guide's role is to point out the birds and talk about the conservation programme.

In general, it's people in a foreign tour group that you're responsible for. The Clifton residents who come to the park usually know their way around. We get a few teachers bringing in classes, but they're the park officer's responsibility.

The last thing to mention is the park's maintenance day, which is coming up soon. We're hoping to get as many volunteers as possible to come and help tidy things up. If anyone is able to drive some other volunteers to the event, please let me know because we need help there.

The park officers will provide you with spades and drills and hammers, all of that stuff, and they'll be offering you some refreshments too, so it should be a good day out. Before you hear the rest of the talk, you have some time to look at questions 16 to 20. Now listen and answer questions 16 to 20.

So, here's a map of Clifton Bird Park. As you can see, the railway line runs along the north-west of the park and road access is on that side too from Clifton Lane. We want volunteers to work on a few different areas on maintenance day, which is coming up soon.

Firstly, the wooden bridge. I'll explain where that is. You can see Clifton Lane and the main gate into the park.

On the southern side of Clifton Lane is one of our car parks and below that, there are two similar-sized ponds. The wooden bridge runs between those two ponds. We just need to make it a bit stronger.

Some volunteers will be doing a bit of painting at the observation tower. The tower's in the south-east corner of the map. You see there are two different-sized ponds there? The tower's on the south side of the larger pond at the end of the path.

We'll need about three people to help out. We need to replace the windows and the visitor cabins. So on the map, you can see our car park on the north side of Clifton Lane.

There's the woods and on the left-hand side of the map, the railway line. The visitor's cabins are marked there, between the woods and the railway station. You'll also be repairing some nesting boxes.

See the picnic area? The path you want is between there and the big pond. Follow it round all the way to the end. So as we're looking at the map now, the nesting boxes are on the right of

that pond.

Finally, the boat sheds. Towards the top of the map, you've got that smallish pond quite near the railway line, and there are two places marked up there. The boat sheds are on the same side of the pond as the woods, not the place marked at the tip of the park.

What we want you to do... That is the end of part two. You now have 30 seconds to check your answers to part two. Part three.

You will hear two teachers called Andrew and Sarah discussing how to prepare students for a geology field trip. First, you have some time to look at questions 21 to 25. Now listen carefully and answer questions 21 to 25.

Hi, Sarah. It's great that we've got some free time this afternoon to decide what advice to give when we talk to the students on the geology field trip to Iceland. Hi, Andrew.

Yes. I've already jotted down a few ideas about the issues that come up on these trips. We should include something about existing rules and laws that apply, like the country code.

Or the mountain code. Yes, the country code is mainly just common sense, so let's include the mountain one. That's what they need to know about for geology.

Then there are similar guidelines for caving, but they won't need those in the part of Iceland we're going to. OK. Right.

Let's think about when they're on site and looking after the environment. I don't mean not dropping litter, that's obvious, or, like, closing gates. But what about not scaring birds or damaging rare plant life? Actually, what I think happens is that they all become so focused on what they're doing that they forget about other things around them.

It's not intentional damage. And we have to include something about collecting samples. That's vital for geology students.

Yeah, there's quite a list of rules about that. For example, only take minute samples and only if necessary. Yes, that's the golden rule.

That has to come first, and then I guess never take a fossil away from the area. And when you do disturb an area to take a sample, make sure you leave it as you found it. OK.

And there's something we still have to find out about. Isn't there something about how you can never take a sample from a wall? You mean a man-made wall or something like a natural rock face? A wall, like of a building. Don't you just have to get permission from the owner? But I'm not sure, to be honest, so we need to check that.

Another really important thing is advice on safety, especially as a lot of our trips are along the coast. Yes, well, you can usually hear if any large boulders start to tumble down a cliff. And you

realise you're on soft sand when you start sinking.

But when people are working on the seashore, they often fail to notice that the tides come in and they're cut off by water. That's what we should make a point about. OK.

Before you hear the rest of the discussion, you have some time to look at questions 26 to 30. Now listen and answer questions 26 to 30. Before we do anything else, could we just talk about the reading packs we put together for the students to read before they go on the field trip to Iceland? Absolutely.

They'll need to do most of the reading beforehand because there won't be time while we're away and there's a lot of technical data. That's certainly the case in the pack called geothermal fields. Does that cover industrial uses of geothermal energy? No.

It deals with harnessing the heat generated from the earth in geothermal areas to grow vegetables for local consumption. They'll need to understand the geological characteristics that make this possible. Right.

The reading pack called the hotspot will help them understand how Iceland differs from other islands formed at the same time, like Bermuda and the Canary Islands. It's the existence of the hotspot that explains the rock formations of this island and makes it unlike any of the others. Now I definitely think they should read the pack about glaciers.

They need to be aware that although the ice in glaciers up in the mountains can stay frozen for thousands of years, if anything happens to make the glaciers melt suddenly, the water produced pours down the valleys and it can mean that whole villages suddenly have to be evacuated. Right. Then the basalt rock pack shows how Iceland's landscape, like many other islands, has been moulded over millions of years by lava flows from volcanic eruptions, especially the area in the north-west of the island.

And lastly, reading about geothermal power plants will inform them of Iceland's plan to stop using energy derived from carbon in the future. Heating and electricity will come from sustainable sources, which won't cause any pollution. I think that'll be all the reading they'll have time for.

That is the end of Part 3. You now have 30 seconds to check your answers to Part 3. Part 4 You will hear part of a lecture to business management students about what managers should do when their organisation faces a crisis. First you have some time to look at questions 31 to 40. Now listen carefully and answer questions 31 to 40.

Today I want to talk about how organisations can respond to a crisis, which happens when a serious problem occurs suddenly and must be dealt with quickly. I will talk about a theory that tells crisis managers how to communicate in different kinds of crises. Some people ask why we need theory in crisis communication.

Isn't logic the answer? Yes, it is sometimes. But organisations often handle crisis communication badly. What we find is that, in reality, much of the advice that organisations receive on how to respond to a crisis is just a guess.

Theory and research allow us to take those suggestions and test them. Then managers can be given advice based on actual evidence of what works and what doesn't. The crisis theory has categorised three general types of crises.

One type is a crisis where the organisation is a victim and has very little responsibility. For example, this kind of crisis could be caused by a rumour. The second kind is accidental.

There isn't much responsibility because there are other outside factors that contributed to it. And the third one, and the most difficult to actually manage, is a preventable crisis. In this kind of crisis, those affected believe strongly that a mistake was made within the organisation.

The type of crisis is important because the more people think the organisation is responsible for the crisis, the angrier they become at the organisation. The theory begins by suggesting a two-part basic response that can be used in all kinds of crisis. The first part is to provide information to those affected so that they can protect themselves from further harm.

Many crises pose a risk to people. For example, if there is a chemical release, people might have to evacuate an area. Or if there's a product which could be harmful, people need to be told about it so they don't buy it or so if they have bought it, they can return it.

The second part of the basic response is to communicate the action the organisation is planning in order to prevent another crisis. This is important because those affected by a crisis are often concerned that it is going to happen again. Beyond this, crisis managers also have other tools to shape how people think about the crisis.

Crisis managers can use several strategies to do this. One strategy is to diminish the crisis. If crisis managers have proof which is convincing, they can argue that a crisis is not as bad as people think.

If they can argue this successfully, the harmful effects are reduced. Another way to shape thinking is to give excuses which emphasise a lack of intent. Therefore, people will see the crisis as an accident.

This is important because an accidental crisis is much easier to manage than an intentional crisis. Crisis managers can also protect the organisation's reputation when there is a major crisis. Their first goal is to reduce the negative opinions generated by the crisis.

This can be done by presenting new positive facts and figures about the organisation or by reminding people of past good works done by the organisation. Rebuild strategies are useful for preventable crises or when there has been a series of accidental crises, as these crises present a severe threat to the perceived reliability of the organisation. For example, a crisis

where the organisation is clearly at fault or broke a law can be very damaging and can result in loss of business.

Rebuild strategies can also be used to reduce the impact of the crisis. To do this, crisis managers say and do things to benefit those affected by the crisis. The reputation of the organisation can also be protected in practical ways.

The problem can sometimes be addressed by offering an apology to those affected by the crisis. This may be sufficient action when the problem is relatively minor. However, if the crisis is very severe, the most common strategy is to offer compensation to those affected.

So, to summarise, crisis communication theory is interesting to managers as it gives positive guidance on how to respond. It can help them figure out... That is the end of Part 4. You now have 1 minute to check your answers to Part 4. That is the end of the listening test. You now have 10 minutes to transfer your answers to the listening answer sheet.
